

# FAA Safety Stand Down and New Runway Information for KPUB

The seminar will focus on preventing Loss of Control (LOC) accidents. LOC is the leading causal factor in fatal accidents. The Safety Stand Down will look at LOC from three different angles: preflight mistakes, aeronautical decision making that leads to loss of control, and practical tips on what to do if you do find yourself in a LOC situation. Also, Pueblo ATCT will provide information concerning the runway construction at the airport.

**Directions:** Registrants check in with security guards upon entering facility. Escorts will usher individuals to cafeteria and auditorium.

## A message from the National FAASafetyTeam Manager

Over 10,150 AMTs earned an AMT Award last year. Will you, this year?

Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!
